

Closed circuit cooling towers

Options and accessories

Sound attenuation

FXVS closed circuit cooling towers use **quiet and low kW axial fans**, but to reduce noise even further, you can extend your FXVS cooling tower with sound attenuation:

- cylindrical baffles at the air intake
- insulated discharge attenuator without baffles

or choose the [Whisper Quiet fan](#) alternative.

Your [local BAC representative](#) can explain any of the above sound attenuator options in more detail and provide you with [sound pressure and sound power data](#).
