

Refrigerant condensers

Options and accessories

Sound attenuation

Polairis condensers use **quiet and energy efficient radial fans**, but to reduce noise even further, you **can** extend your Polairis condenser with sound attenuators at the air intake and discharge points.

- Discharge attenuator with vertical baffles
- Intake attenuator with straight baffles

Your [local BAC representative](#) can explain the above sound attenuator option in more detail and provide you with [sound pressure and sound power data](#).
